

WHEN IS IT TIME TO

REPLACE YOUR WATER HEATER VERSUS DOING A COMPLETE WATER HEATER REPAIR?

What is the age of your water heater?

The average lifespan of a residential water heater is about 8-12 years. Traditional water heaters have a shorter lifespan than tankless water heaters which have a lifespan of 15-20 years.

Is your water heater making a strange noise?

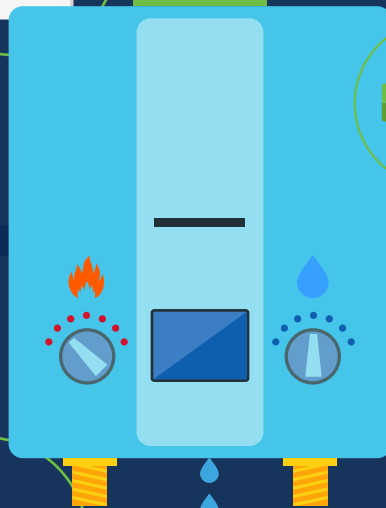

Noises from the water heater can indicate a loose, broken, or worn-out part. This is when you call Olympic Plumbing Technology to come see what the noise is originating from and if it is more cost-effective to repair or replace the unit.

Is your water heater not producing enough hot water?

This could indicate that the heating element is going out or the heater is not able to keep up with your water heating needs. Olympic Plumbing Technology can provide you with new energy efficient options!

Is your water heater leaking?

Leaks can be from items such as a loose valve or part or it could also mean that the water heater is starting to fail internally and is in need of replacement.

If you said yes to any of these questions above, call Olympic Plumbing Technology today to have our trained technicians come take a look at your water heater!
